This October edition of ONE STOP EDUCATOR will support and provide educators with teaching information and links to topics discussed in this month's SAFETY EDUCATOR NEWSLETTER. It will also provide as a reliable resource for 3rd grade students wishing to participate in the Annual Fire & Life Safety Calendar Contest.

2019 –2020 Fire Prevention Week Theme: Not every hero wears a cape. Prepare and Practice your Escape!

Introduce Fire Prevention Week to your classroom students in grades 1-5 through these fun, interactive lessons and activities. NFPA has everything you need from music and movement fire-safety videos, storybook apps, Common Core-aligned lesson plans and take home materials to get families involved.

Send home this family home fire safety checklist to encourage families to go through various rooms within the home to ensure it is as safe as possible and to then create their home fire escape map.

Sparky’s Schoolhouse is a classroom portal for teachers. It includes music videos, lesson plans, eBooks and apps.

Change your Batteries in your Smoke and Carbon Monoxide

Smoke and carbon monoxide alarms save lives. Every home needs them. These alarms have special locations where they need to be placed within the home to keep families safe. A smoke alarm senses smoke. It will sound if there is smoke in the home, possibly from a fire. A carbon monoxide alarm senses a colorless, odorless gas that can not be detected by the human nose. When the smoke and/or carbon monoxide alarms sound, everyone should leave the home right away. Alarm batteries need to be changed at least once a year. Help your students learn how they can keep their families safer.
